

With over 5 years of experience in software engineering, quality assurance engineering, testing methodologies and managing team efforts, I believe I can be a meaningful contributor to your team.

My experience has been focused on ensuring high quality software through meticulous test planning, cross-functional collaboration and process improvement. In my recent roles, I've led efforts to create comprehensive test strategies, trained teammates on best practices, and partnered closely with stakeholders to ensure product readiness, from pre-development through release.

I am an enthusiastic Software Engineer specializing with Unreal Engine and Quality Assurance Engineering, specialized in designing and optimizing test plans to ensure high-quality product delivery. Proven ability to identify, troubleshoot, and document complex issues across various systems and environments.

Utilizing a programming background in C#, C++, Python, SQL, and Batch scripting, paired with an understanding of AWS Services, Docker, networking topology, Microsoft OS, Server OS and O365 applications, I use this knowledge to be an IT & Games Development hobbyist in my spare time to exploring new technologies, I am actively working to expand my knowledge on Python and C++ through development courses to expand capabilities in software development and automation.
